In this course students will learn about sustainable resource management through a case study in water usage in a rural agricultural valley in northern India. Groundwater is the primary source of drinking and irrigation water in the area. However, this resource is threatened by overuse from a growing population and by climatic changes in monsoon rains. Through project-based activities with our local partners from the Sehgal Foundation and IIT Roorkee, students will gain insight on how the culture, economics, and the environment will shape the future in this area and determine the sustainability of critical water resources.

**GURGAON, HARYANA, INDIA**

**Development of Resilient and Sustainable Agricultural Watersheds**

**Application Deadline:** MONDAY, SEPTEMBER 21, 2015

**CONTACT**
