In this course, students will be introduced to economic and urban development trends in Kerala, the environmental implications of many of those trends, and the ways in which individuals and organizations have in many cases succeeded in facilitating environmentally sustainable development. The course will focus on three facets of sustainable development – low-cost construction technology, sustainable economic development, and eco-tourism – at two different locations in Kerala (Trivandrum and Kochi). This is an extraordinary opportunity for advanced undergraduate and graduate students to travel to India, interact with highly acclaimed sustainable development professionals, and learn about their innovative techniques.
